2. Compared to Invisalign aligners previously made from single-layer (EX30) material.

How does Invisalign System work

01

Meet with your doctor for a comprehensive consultation

Before starting your Invisalign treatment, your doctor will discuss your desired outcome and show you a simulation of what your smile could look like after Invisalign treatment using the SmileView tool.

Your doctor will then take an impression of your teeth using an intra-oral scanner or PVS impressions. Using Align's proprietary ClinCheck software, your doctor will map out a customised 3D treatment plan, just for you.

02

Start transforming your smile

Your series of custom-made aligners will be given to you for you to wear every day, and change approximately every 1-2 weeks.

What you may expect during your treatment:

SmartForce Attachments:

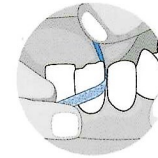

Small, clear or tooth coloured "bumps" to help with certain tooth movements

Elastics:

May be needed to enhance movements

02

Polishing and Contouring:

To create additional space or loosen the contact points in your teeth.

You will visit your doctor approximately every 6-8 weeks to monitor your progress, and receive the next series of aligners. With Invisalign Virtual Care on My Invisalign App, your doctor can also monitor your progress remotely.
